Location

Stockholm, Sweden

Profile

Experienced software developer with a bachelor's in computer engineering and a strong background in building robust, user-focused applications. Proficient in both frontend and backend technologies, with hands-on experience in full-stack development, databases, and cloud platforms. Comfortable working in agile teams, writing clean and maintainable code, and solving real-world problems with scalable solutions. Driven by curiosity and a passion for continuous learning, I'm eager to contribute to impactful tech projects and grow alongside a dynamic team.

Education

BSc in Computer Engineering
Kungliga tekniska högskolan
2022-2026

Skills

Agile/Scrum Methodologies

Responsive Web Design

UI/UX Design Principles

Git, GitHub, GitLab

RESTful APIs, GraphQL

HTML5, CSS3, JavaScript

React.js, Vue.js, Gatsby

SQL, NoSQL

Docker, CI/CD

Experience

Store Associate | Bauhaus AB

05/2024 – 08/2024

- Managed warehouse logistics, including unloading and organizing goods to maintain efficient operations.
- Provided excellent customer service by assisting customers with product information and fulfilling their needs.
- Maintained inventory accuracy and ensured the cleanliness and orderliness of the storage area.

System Developer | Sisu Net AB

01/2022 – 04/2022

- Developed components for an internal ERP system for telecommunications distribution.
- Gained experience building APIs and programming according to an existing style guide.
- Regularly engaged in pair programming, improving communication and collaboration skills.

Projects

Neural Network for ECG Time-Series Classification

Python, TensorFlow, Scikit-learn, Signal Processing

Built and trained a 1D Convolutional Neural Network (CNN) to classify ECG signals using the PTB-XL dataset. Preprocessed multichannel time-series data, applied normalization and resampling techniques, and encoded clinical diagnosis labels for supervised training. Achieved strong classification performance across multiple diagnostic categories.

Graded A in Applied Machine Learning and Data Mining course at KTH.

Portfolio Website – GitHub API Integration

Gatsby.js, JavaScript, CSS, GitHub REST API

Built and deployed a personal portfolio using Gatsby.js and styled with custom CSS. Integrated the GitHub REST API to dynamically display pinned repositories and real-time contribution activity. Demonstrated skills in working with third-party APIs, handling JSON data, and rendering dynamic content in a static site generator framework.

Run Tracker App

Swift, SwiftUI, CoreLocation, MapKit

Built a mobile app that tracks running sessions using GPS, calculates pace and distance, and visualizes the route on a map. Incorporated MVVM architecture and integrated logic to capture run statistics and save screenshots post-run.

KTH Calendar Integration Project

Java, REST APIs, XML/JSON parsing

Collaborated on a university project to integrate KTH's internal API system for fetching and displaying students' academic calendars. Focused on backend logic, data formatting, and error handling to ensure accurate and timely calendar rendering.

Weather App

React.js, RESTful APIs

Created a responsive web app that fetches real-time weather data from a public weather API. Implemented search functionality and dynamic UI updates based on API responses. This project demonstrated proficiency in API integration, asynchronous operations, and frontend state management.
